

FIELD INSPECTION REPORT - CIVIL / P-WAY (TMS)

GOVERNMENT OF INDIA - MINISTRY OF RAILWAYS
Northern & North Central Railway - NDLS-CNB Trunk Corridor

Submitted by: Track Patrol Gang / PWI Field Inspector

Inspection method: Visual patrol + USFD ultrasonic testing (RDSO/IRPWM norms)

Corridor: New Delhi (NDLS) - Kanpur Central (CNB), 440 km

Report class: Field evidence attachment - accompanies digital requisition

OBSERVATIONS

- Rail surface condition and geometry recorded at reported chainage.
- Track Geometry Index (TGI) computed per RDSO composite formula.
- Fastenings, sleepers and ballast profile examined over 100 m either side.
- Cess drainage checked; no immediate washaway risk observed.

RECOMMENDED ACTION

- Recommend block possession for attention as per attached severity tier.
- Tamping / deep screening machine to be indented if geometry is POOR.
- Impose temporary speed restriction if USFD status reads IMR.
